This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims

Claims 1 – 36 (Canceled).

Claim 37 (Currently Amended). Carbon particles having surface filaments formed during the thermocatalytic decomposition of hydrocarbon fuel comprising in combination:

a plurality of carbon filaments that are [an] approximately one micron in mean diameter [in average and from at least one to two orders of magnitude thicker than conventionally produced carbon nanofibers];

[an a hydrophobic] an “octopus”-like structure, with a portion of the structure being substantially hollow, and each filament being substantially of longitudinal uniformity and of graphitic structure; and

a hydrophobic property of oil film adsorption from a surface of water.

Claim 38 (Canceled).

Claim 39 (Currently Amended). The method of producing carbon particles having surface filaments of about one micron mean diameter, an “octopus”-like structure with a hollow portion, and longitudinal uniformity, of graphitic structure, comprising the steps of:

a) passing electrical current through [carbon-based] catalytic material selected from at least one of carbon black and activated charcoal and heating [[it]] the catalytic material to about 850°C to about 1200°C;

Appl No.: 10/623,227

Atty. Dkt. No:

UCF-273DIV

b) passing a stream of hydrocarbon fuel through said the ~~[carbon-based]~~ catalytic material with production of hydrogen-rich gas and carbon with filamentary surface deposited on the surface of said the catalytic material; and

c) recovering carbon particles with a filamentary surface to be used for the clean-up of oil spills on the surface of water.

Claim 40 (Canceled).

Claims 41 - 43 (Canceled).
